

# RESIDENTIAL STREET - RECONSTRUCTION

---

City of Winnipeg

Winnipeg, Manitoba

## Project Description

KGS Group was retained by the City of Winnipeg to provide design, contract administration and resident services for various residential streets since 2004. Each reconstruction included excavation, storm & sanitary sewer upgrades, subdrain installation, geotextile application, subbase & base course installation and concrete surfacing. Works also included sidewalk renewal and boulevard restoration.

As a commissioned researched project from the City of Winnipeg, KGS Group assessed the performance and value of substituting recycled concrete for limestone subbase material.
