

POINTE DU BOIS GENERATING STATION - STAGE III REDEVELOPMENT

Manitoba Hydro

Winnipeg, Manitoba

Project Description

KGS Group is currently conducting a Stage III redevelopment study for Manitoba Hydro at their Pointe du Bois Generating Station. The plant has a capacity of 72 MW and has been in operation since 1911. KGS previously performed the Rehabilitation / Redevelopment study for Winnipeg Hydro, the previous owner of the plant.

The study objectives include finalizing a new 120 MW powerhouse and spillway arrangements, conducting geotechnical investigations, obtaining turbine / generator quotes from suppliers, reviewing requirements for the decommissioning of the existing structures, and preparing cost estimates and a preliminary construction schedule and cash flow.
